

Subscriber Self-Service

A database-driven platform for profiles, subscriptions, payments, content and personalized entertainment.

Satwika — 2520090111

Siri Chandana — 2520090198

Problem Statement

Existing media platforms often require subscribers to depend on customer support for routine tasks.

- Checking subscription plans and renewals
- Viewing payment details and updating profiles
- Finding suitable entertainment content
- Accessing subscriber information quickly and independently

Less support dependency • faster
access

Proposed Solution

A single mobile platform where subscribers manage their entertainment services independently.

PROFILE

Manage personal details

SUBSCRIPTIONS

View & renew plans

PAYMENTS

Track payment details

CONTENT

Discover entertainment

HISTORY

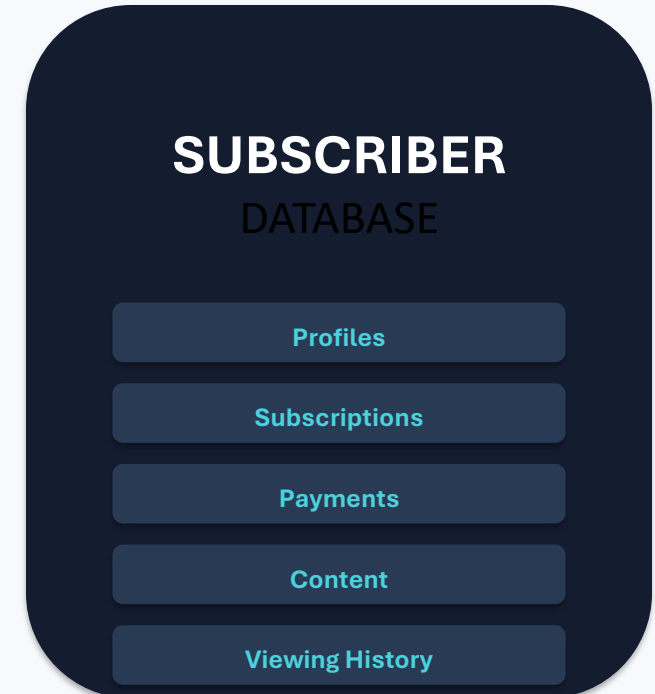

Store viewing history

PREFERENCES

Personalize experience

Database Design & Data Management

- Relational tables for subscriber, subscription, payment and content data
- Primary and foreign keys to connect related records
- Normalization for efficient and reliable data management
- SQL queries for data access and operations
- Transactions and data integrity for dependable updates

Core Modules

01 **Subscriber Profile Management**

02 **Subscription Management**

03 **Payment Management**

04 **Entertainment Content Records**

05 **Viewing History & Preferences**

06 **Recommendations & Notifications**

Recommendations + notifications

The app can use viewing history and user preferences to support personalized content recommendations.

RECOMMEND

Suggest suitable entertainment content.

NOTIFY

Subscription expiry and payment reminders.

DISCOVER

Make new content easier to find.

Technology Stack

Android Studio

Main mobile development platform

Java / Kotlin

Mobile application development

XML

Mobile UI design

MySQL

Relational database

Node.js + Express.js

Backend APIs

Firebase

Authentication & notifications, if required

Postman

API testing

Git / GitHub

Source control & versioning

VS Code / Figma

Backend development / UI design

Expected Benefits

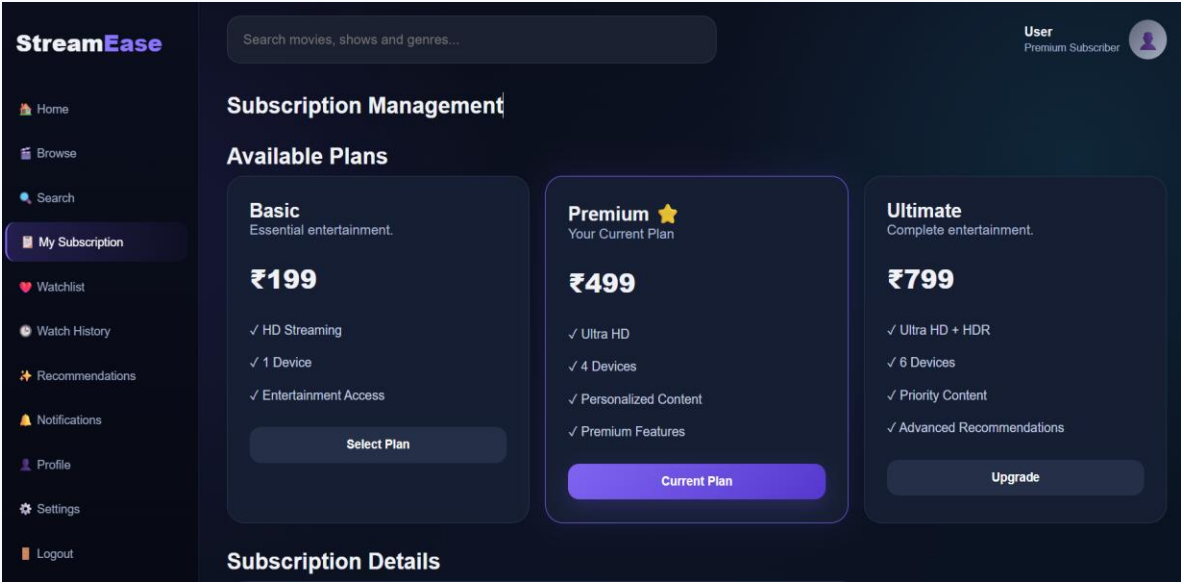

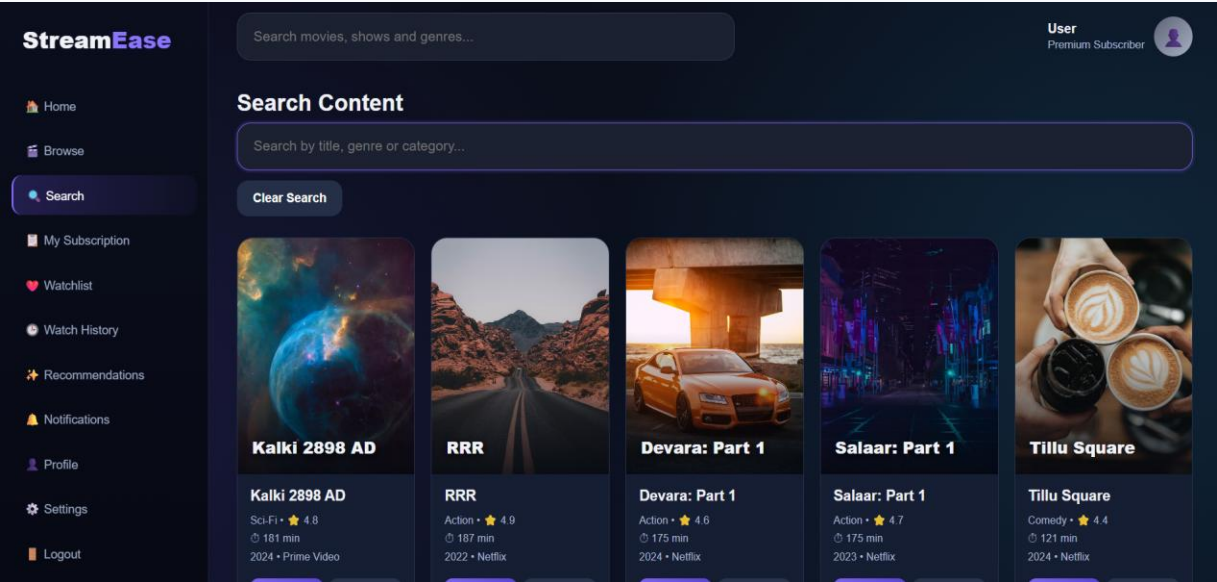

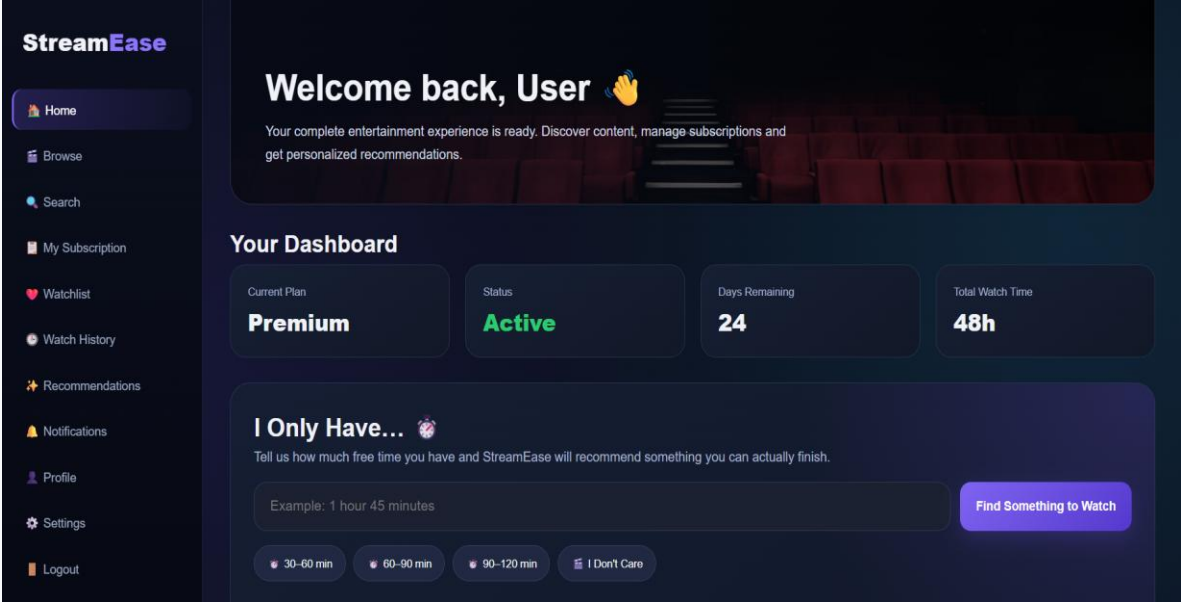

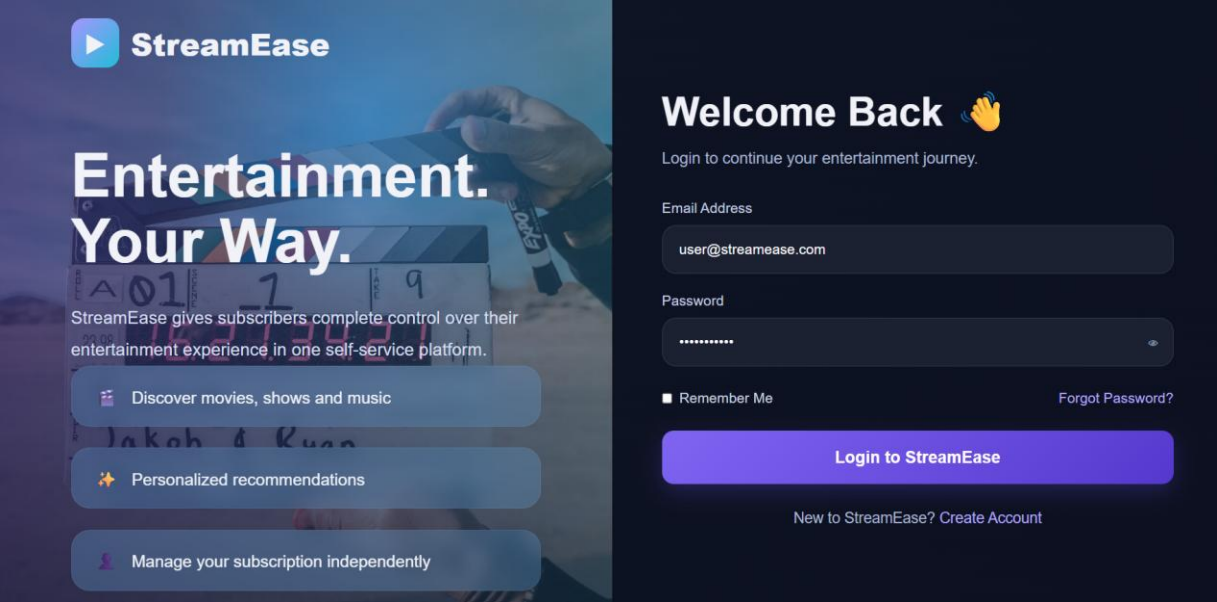

- 01 Reduced support dependency** Subscribers can handle routine service tasks themselves.
- 02 Improved service efficiency** Information and actions are available in one platform.
- 03 Reliable data management** Database concepts support integrity and consistency.
- 04 Convenient experience** Profiles, subscriptions, payments and content are centralized.

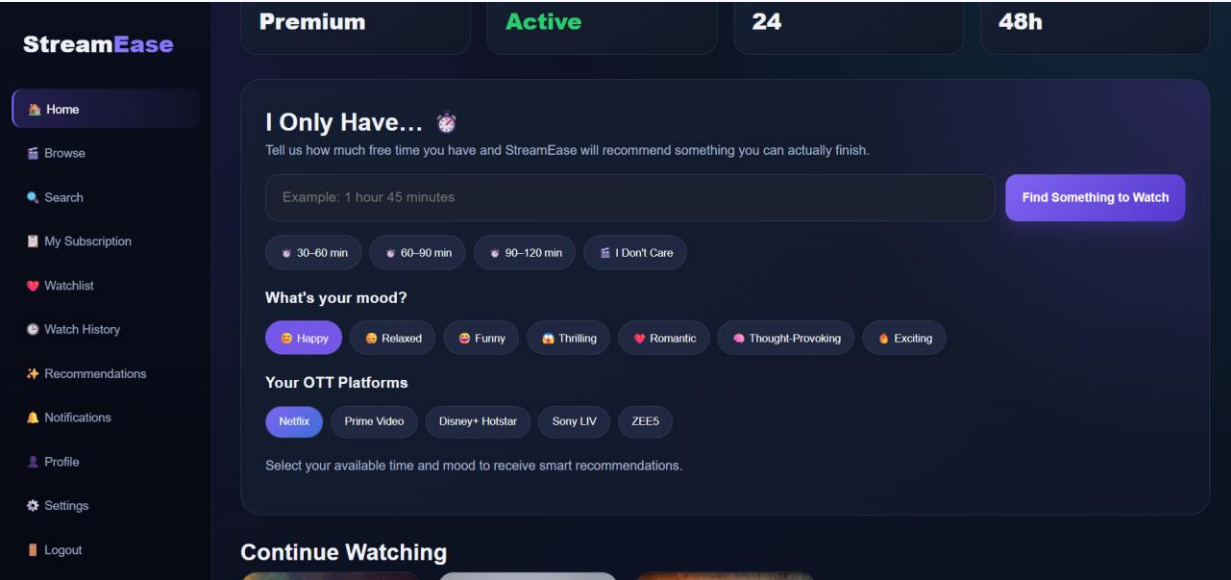

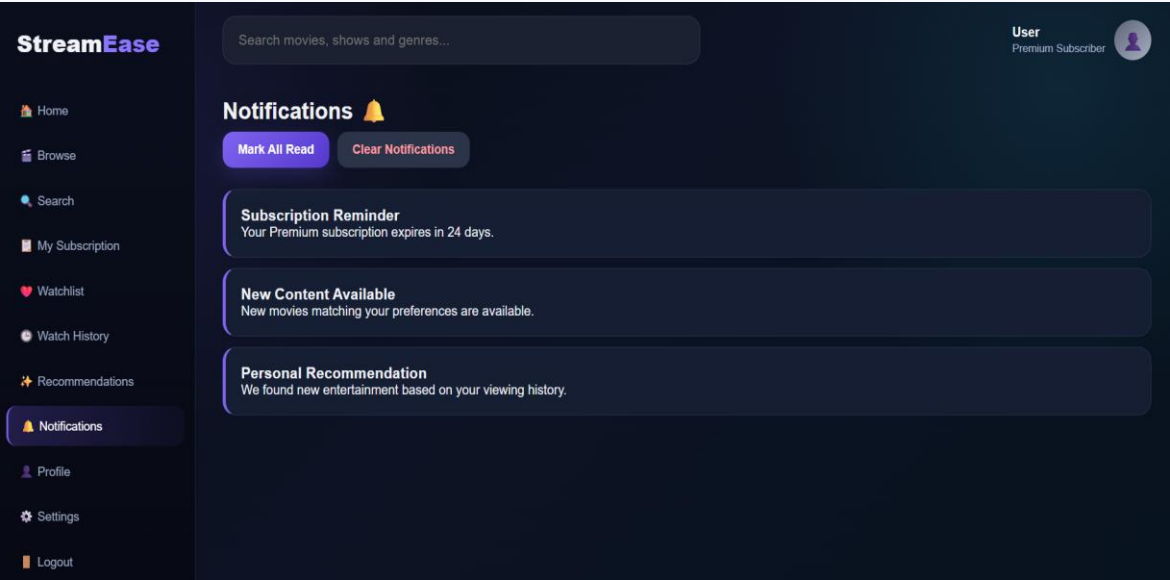

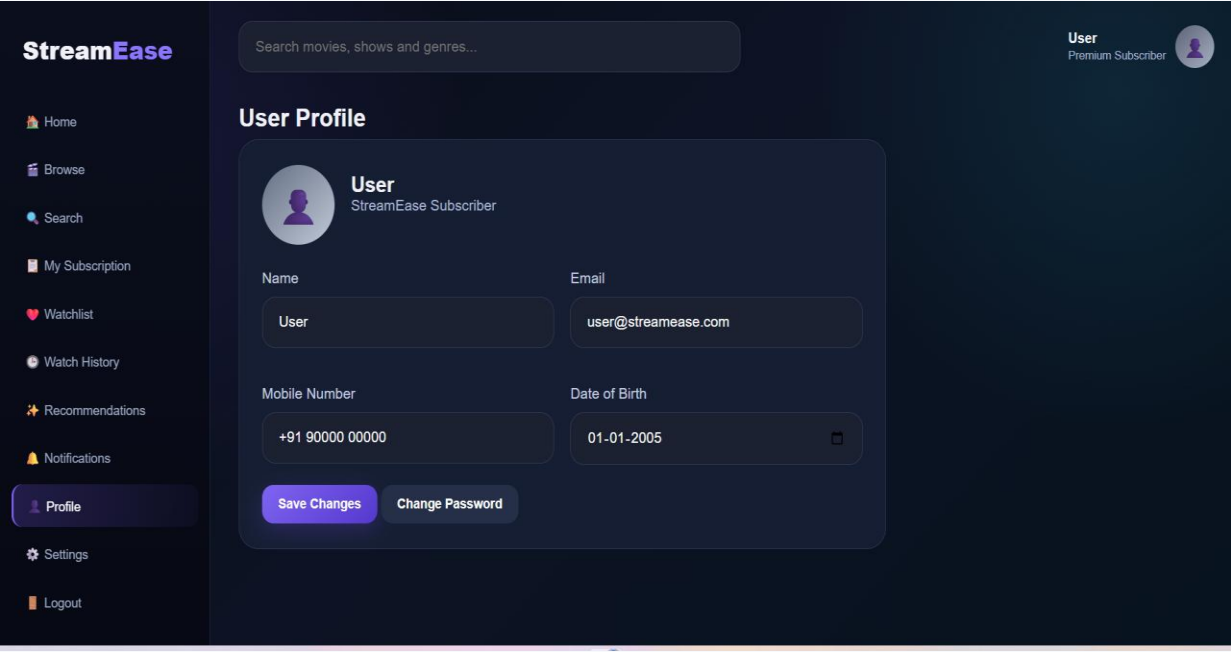

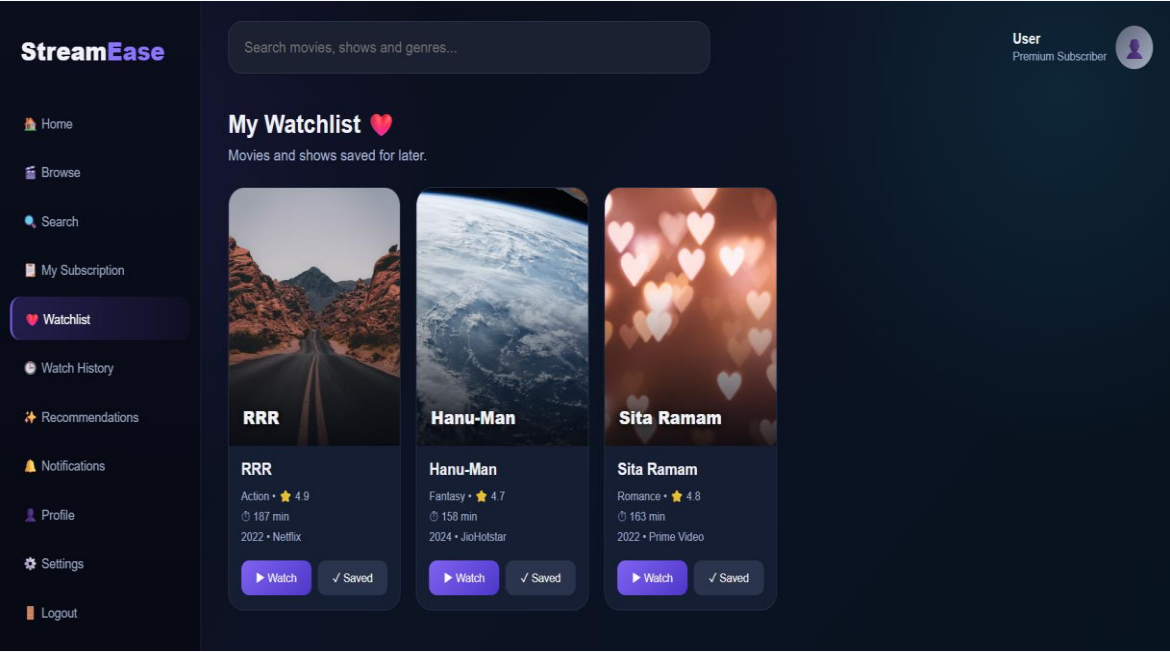

Project Summary

The project aims to deliver a convenient, secure and personalized entertainment self-service experience.

- Centralize subscriber profiles, subscriptions, payments and content
- Use relational database concepts for reliable information management
- Support personalized recommendations and timely notifications
- Reduce dependency on customer support while improving service efficiency
